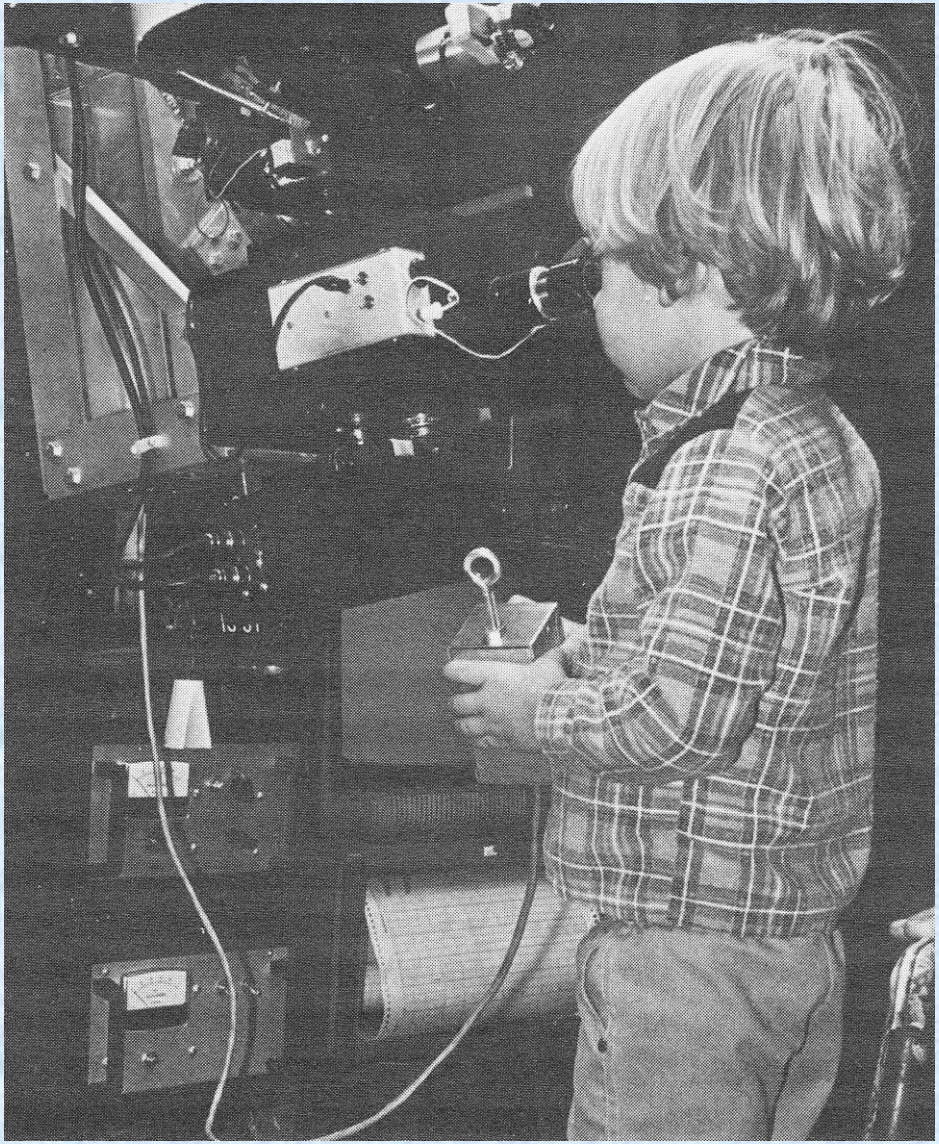
Robotic Telescopes and Observatories

Russ Genet

Eastern Arizona College



The Sky is No Limit For a Creative Mind and a TRS-80™ Microcomputer!

Russ Genet of Fairborn, Ohio uses a TRS-80 Personal Computer for analysis of variable star photometric measurements. Several professional observatories regularly request the data he obtains from his home-built equipment.

Why did he choose a TRS-80? He writes: "My selection of the TRS-80 was not at all accidental. Every manufacturer of microcomputers was contacted . . . strongly considered was the availability of peripherals, service and software (and price of course). Computational power and ease of interfacing were important considerations. Color screens and fancy joysticks didn't carry much weight."

The TRS-80 gives Russ the mental leverage he needs for sophisticated data analysis. A TRS-80 at your fingertips will help turn your ideas into productive realities. You were wise to wait until the small-computer market sorted itself out. Now it's time to buy the winner—TRS-80!
